

## SPI Oil-Bond™ Booms

**SPI OilBond™ Booms solve oil spill problems you encounter fast & efficiently.  
Best of all ..... No more dripping mess!**

SPI Oil-Bond™ Boom after being absorbed and solidified with Diesel Fuel.

Typical oil only sorbent boom fully saturated with Diesel Fuel, squeezed lightly.

**SPI Oil-Bond™ Booms have a superior wicking action far greater than other spill products on the market today. SPI Booms are selective, hydrocarbons are absorbed leaving the water behind. As the OilBond™ Booms reach their capacity the absorbed oil begins solidifying into a rubber-like solid. At this point the booms become a containment boom on the water, not allowing any oils to pass through. When retrieved from the water surface, no oil will be released**

A 10' x 5" SPI Oil-Bond™ Boom containing and absorbing an oil spill

The SPI Oil-Bond™ Boom is wicking in the oil, while containing the oil spill from spreading

**SPI Oil-Bond™ Booms are the problem solver for companies, municipalities, marinas and many other businesses that have oil discharge and sheen removal problems. Oil-Bond™ Booms will always remain buoyant whether fully saturated or only partially absorbed. On roadways, concrete or asphalt surfaces, SPI Oil-Bond™ Booms work fast to contain and absorb spilled fluids. SPI Oil-Bond™ Booms work exceptionally in emergency response operations to keep fuel and oils out of storm drains, soil and preventing contaminants from getting into waterways. In rainy conditions only the spilled oil is absorbed and the water will pass through, minimizing the amount of waste to be disposed of.**

### Available Sizes

- 4' X 2½" (6 per box)
- 10' X 2½" (4 per box)
- 20' X 2½" (4 per box)

### Order #

- B-04-2
- B-10-2
- B-20-2

### Available Sizes

- 6' X 5" (2 per box)
- 10' X 5" (2 per box)
- 16" X 5" (1 per box)

### Order #

- B-06-5
- B-10-5
- B-16-5
