

SPI Oil -Bond™

SPI offers the best technology on a line of proven spill products to deal with today's clean-up and disposal problems. All SPI Products absorb and solidify Hydrocarbons, Oils, Solvents, Fuels and PCBs, locking them into an irreversible rubber-like solid. Solidify all of these Fuels, Oils and Solvents with: SPI Oil-Bond.

GASOLINE
 #4 FUEL OIL
 TRANSFORMER OIL
 JP-4 FUEL
 XYLENE
 KEROSENE
 ANY MANY OTHERS

DIESEL #1 & #2
 CRUDE OILS
 JET A FUEL
 BENZENE
 TOULENE
 PCBs

Oil-Bond™ has become a valuable tool for companies that have to deal with oil/water problems. Oil-Bond™ has proven to save thousands of dollars by solidifying floating oils on water surfaces. The oil transforms into a rubber-like sheet which can then be removed, leaving the water virtually sheen free.

A sump pump is lowered through the solidified oil, lowering the water level from 3' to 6".

The Solidified oil is lifted off the water surface in a rubber sheet

For open water spills, Oil-Bond™ can be applied directly onto the water surface using a variety of different types of air pressure equipment. The particulate will not absorb water and will only work when it comes in contact with Hydrocarbons. Oil-Bond™ works exceptionally well in final phase clean-up and sheen removal. As the oil is absorbed into the particulate it turns a darker color. When the particulate stops turning colors, enough material has been used.

Available Sizes

10 - Pound Pail
40 - Pound Bag

Order

P-10
B-40

Capacity

up to 8 gallons
up to 32 gallons
